CLEARANCE REQUIREMENTS:
A- 43.9' MIN. TURNING RADIUS
B- 42' TURNING RADIUS
C- 28.4' TURNING RADIUS

PLEASE NOTE:
SOLID WASTE VEHICLES WEIGH APPROX. 20 TONS WHEN FULL. DRIVEWAYS MUST BE BUILT TO SUPPORT THIS WEIGHT WITHOUT DAMAGE TO DRIVE.

NOTES:

1. ALL CURBS ARE TO BE ALIGHNED ON THE OUTSIDE OF ENCLOSURE WALLS. THE CURBS SHALL NOT INTERFERE WITH THE ROUTE OF THE SOLID WASTE COLLECTION VEHICLE.

2. IN GENERAL TERMS, ALL SOLID WASTE COLLECTION ROUTES SHALL MEET ENGINEERING DESIGN CRITERIA (STREET WIDTHS, TURNING RADII) IN A MANNER THAT ALLOWS SOLID WASTE COLLECTION VEHICLES ACCESS TO BIN ENCLOSURES SITES SHALL BE DESIGNED SO COLLECTION VEHICLES CAN SAFELY ACCESS AND LIFT A BIN WITHOUT OBSTRUCTIONS (GROUND LEVEL AND AERIAL OBSTRUCTIONS).

3. FOR THE SAFETY OF OTHERS, SOLID WASTE COLLECTION VEHICLES WILL NOT BACK UP MORE THAN 50 FEET AFTER SERVICING A BIN.

4. NO AWNINGS OR BUILDING PROJECTIONS ALLOWED IN SOLID WASTE COLLECTION VEHICLE ROUTES. MIN. OVERHEAD CLEARANCE OF 14' IS REQUIRED IN DRIVE AND 25' OVER BIN ENCLOSURE AREA FROM STEEL SAFETY POSTS BACK 50'.

5. ROUTES SHALL BE CLEAR OF ALL OBSTRUCTIONS (CURBS, WALLS, OVERHEAD WIRES, AND AWNINGS) TO PREVENT DAMAGE FROM THE COLLECTION VEHICLE.

6. TAKE NOTE OF THE SOLID WASTE COLLECTION ROUTE. THE COLLECTION VEHICLE SHALL TRAVEL THROUGH A SITE ONCE WITHOUT BACKTRACKING.

7. BIN ENCLOSURES ARE TO BE ANGLED NO MORE THAN 30 DEGREES FROM THE CENTER LINE OF THE SOLID WASTE COLLECTION VEHICLE ROUTE.

8. BIN ENCLOSURES SHALL BE LOCATED AWAY FROM ENTRANCED AND EXITS SO SOLID WASTE COLLECTION VEHICLE DOES NOT CREATE A SAFETY HAZARD BY BLOCKING IN-COMING OR OUT-GOING TRAFFIC.

SINGLE AND DOUBLE-WIDE BIN ENCLOSURES NOTES

APPROVALS:

CITY ENGINEER — DATE 3/11/08

PUBLIC WORKS DIRECTOR — DATE 03-07-2008

NOTES

1. All commercial properties shall be designed with enclosures to accomodate (1) refuse enclosure for every 20,000 square feet of building space. Restaurants which are designed on a single pad shall have a minimum (1) refuse. The enclosures can be set up as doubles or singles to maximize the use of the property.
2. Multi-unit residential developments shall be designed with either single or double-wide enclosures for trash.
3. Compactors can be used in developments where the employees load and activate the compacting equipment. Developments that allow customers or residents access to the compacting equipment will not be approved. Maricopa county regulations require twice per week collection if food waste is placed into containers.
4. The number of bin enclosures needed depends on the size of the development. Typically, total volume needs can be calculated based on the half-cubic yard per living unit per week. For example, a development with 240 units x .5 yards = 120 yards per week or 10 trash bins (6 yard) serviced two times per week (10 x 6 x 2 = 120 yards).
5. Single-wide bin enclosures shall have a net enclosure opening of 12 feet.
6. Double-wide bin enclosures shall have a net enclosure opening of 24 feet without midwalls. Although not prefered, double wide bin enclosures can be designed with midwalls with a net enclosure opening of 12 feet on each side of midwall.
7. Gates, hinges & mounting hardware shall be installed so there is a minimum 9 foot depth created within each enclosure.
8. Gates, hinges & mounting hardware shall not intrude upon minimum net enclosure opening.
9. Bin enclosures are to be angled no more than 30 degrees from the center line of the solid wast collection vehicle route.
10. All enclosures shall have gates that screen the bins from public view.
11. Bin enclosures to be a minimum of 3 feet from any non-combustible planned or existing structure at its closest point; 5 feet from any combustible planned or existing structure at its closest point.
12. Standards for solid waste vehicle access are addressed in PE-146-1.
13. Standards for triple wide enclosures are addressed in PE-146-3.
14. Standards for bin enclosure screen walls, safety posts, and gates are addressed in PE-146-4.
15. Restaurants must provide a separate enclosed area to accomodate their grease trap. This designated area must not interfere with the trash/recycling collection.
16. Additional items such as landscaping control boxes and lighting may be positioned on the outside of the enclosure walls.
17. A connection to the water system (installation of hose bib) shall not be allowed to facilitate cleaning of the enclosure.
18. A connection to the sewer system (installation of grate/drain) shall not be allowed to facilitate the wash down and cleaning of the enclosure.

4. Modified speed tables shall be constructed with an approved D½ Coarse hot mix, per City of Peoria standards OR MAG ⅜" mix. A tack coat shall be applied prior to application of pavement.
5. Contractor must provide verification of cross-section dimensions.
6. Contractor must properly compact tables to preclude excessive settlement.
7. The contractor shall provide a two year warranty on labor and material. Contractee should request contractor to warrant height to be at least 3.25" tall after 24 months.
8. Permanent striping shall be Thermoplastic Hot Tape or 3M STA-Mark Series SMS-5730 or approved equivalent.

Important:
To gain maximum effect, modified speed tables must be the full 3.5". Modified speed tables shall be 3.5" high with an allowable maximum tolerance of ± 0.25". Contractors must not exceed this height based on consideration for emergency and fire department vehicles. Because of this concern, any modified speed tables constructed over 3.75" must be corrected at the contractors expense.
