

CHAPTER 25 – WATER, SEWERS AND SEWAGE DISPOSAL

Sec. 25-144. Wastewater Contribution Permits.

In addition to all other requirements each industrial user who discharges an industrial discharge into the sewer system and who is designated a significant industrial user by the director shall also:

(a) Obtain a class A wastewater contribution permit from the Director. Any application for a class a permit or an amended class A permit shall contain the information specified in the application form or such other information as may be requested by the Director. Any person intending to commence any new industrial discharge(s) not previously permitted pursuant to an existing permit shall apply for a new or an amended permit at least ninety (90) days prior to initiating such discharge.

(b) Provide all of the pretreatment necessary to comply with categorical standards and pretreatment requirements required by this chapter.

(c) In addition to all other requirements imposed by this chapter upon industrial users, the following types of industrial users who are not significant industrial users may be required to obtain a class B wastewater contribution permit if the Director determines the industrial discharge causes or has the reasonable potential to cause harm or damage to the POTW, worker safety, public safety or the environment:

- (1) Zero process discharge user.
- (2) Users which discharge the equivalent strength of 25,000 gallons per day of domestic waste as measured by bod and ss
- (3) Discharges of polluted groundwater
- (4) Users discharging any of the substances identified in sections 25-100 and 25-138

The industrial user shall comply with all requirements and conditions of a class B wastewater contribution permit issued by the Director under this chapter.
